

# INFO201 DA5 Snapshots

Author: Johann Ravindranathan

## Instructions

For Data Assignment 5, you do not need to publish your Shiny App online (though you can if you would like!). However, to ensure that the instructing team can see what the app would look like on your machine, you will need to take screenshots of your app in several configurations and copy them here. If these all look good, then we will assume that the app works as intended! If not, we'll check out your code for partial credit. In each of the scenarios below, *delete the existing screenshot* and replace it with a screenshot that you take of your own app in a similar configuration as the example app. Make sure that your screenshot shows the app as instructed for each screenshot.

There are many ways to take screenshots. Please try to take a screenshot of only your app window or ensure that there are not other documents open in the background (we don't want to accidentally see anything else on your computer!). For instructions on how to do this, see:

- For macs: [Apple Support Instructions for Screenshots](#)
- For Windows 11: [Microsoft Support Instructions for Screen Snipping](#)
- For other versions of Windows or other operating systems, you'll want to search online, but the instructions are usually pretty similar!

Once you've copied in your screenshots, download this file as a pdf:

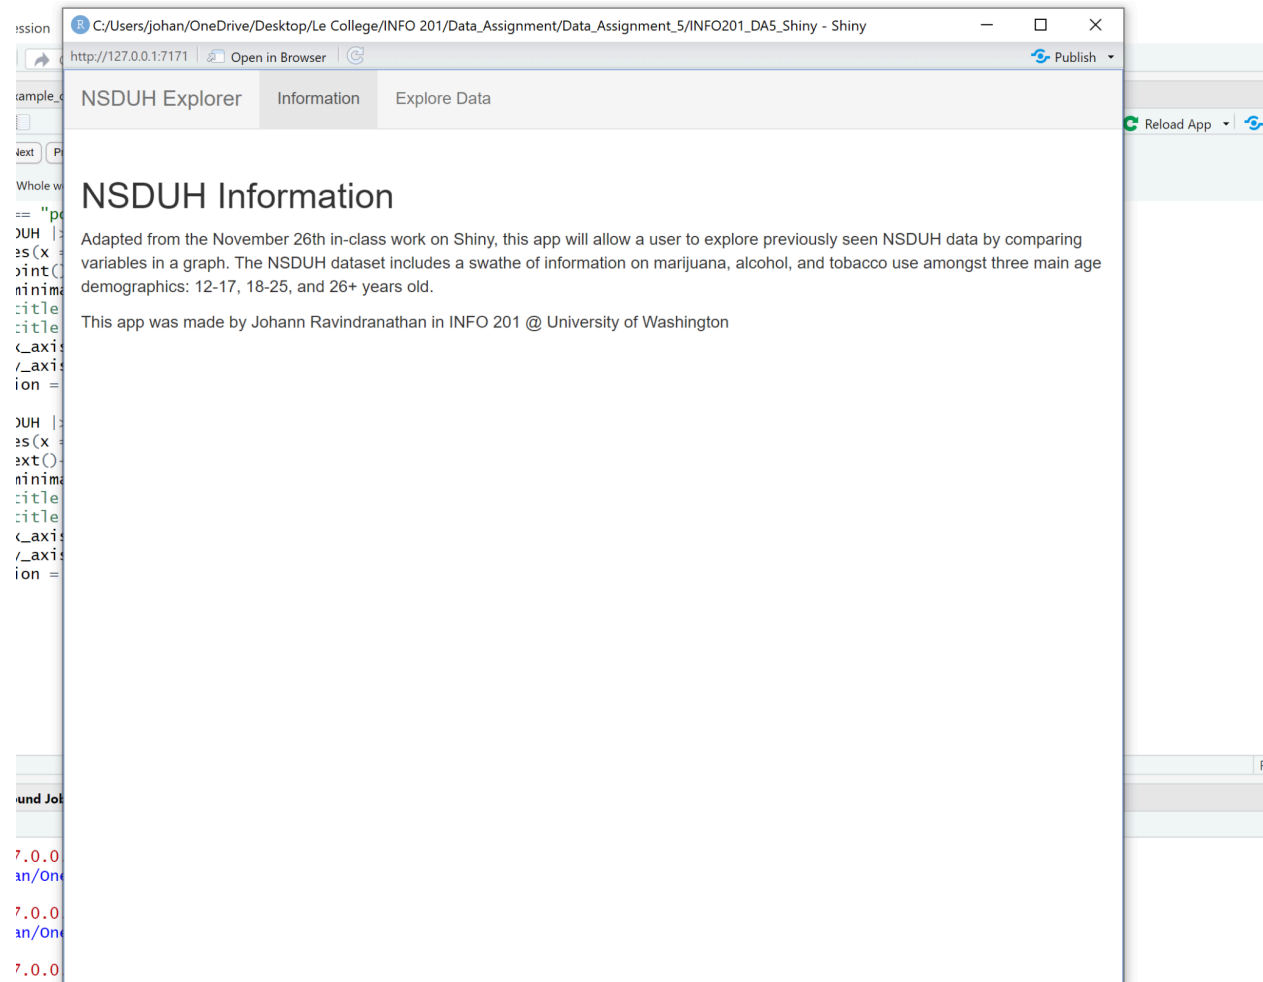

- File -> Download -> PDF Document (.pdf)
- You'll upload this along with your .R files when you submit!

If you were unable to get your app to work for all the requirements, then you can replace the screenshots below with 1 to 4 examples of what your app *did* show when run (with text explanations).

# Screenshots

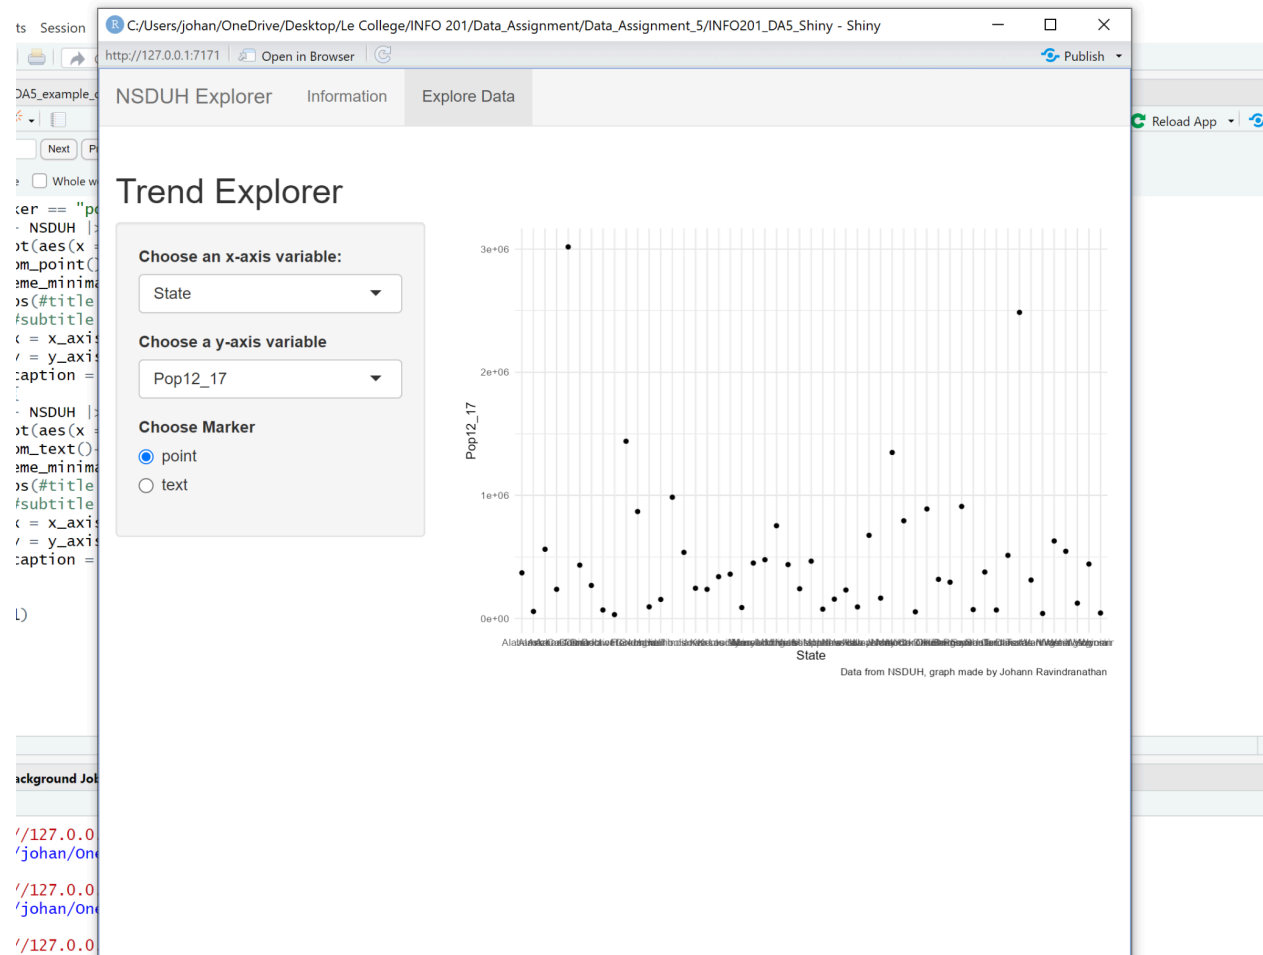

## Screenshot 1

Information page with name.

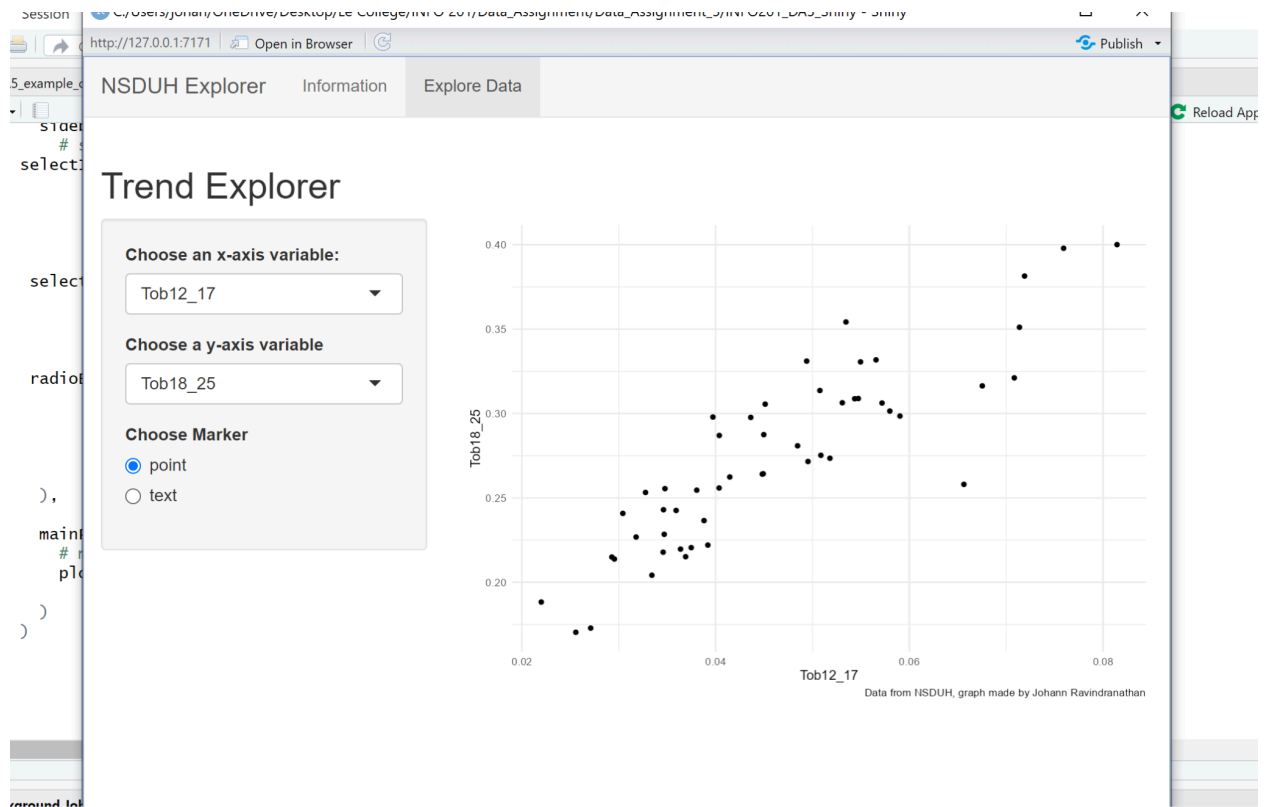

## Screenshot 2

Explore Data page. I set the defaults to State, Pop12\_17, and point. Not title or subtitle as per video and these examples, caption is bottom right.

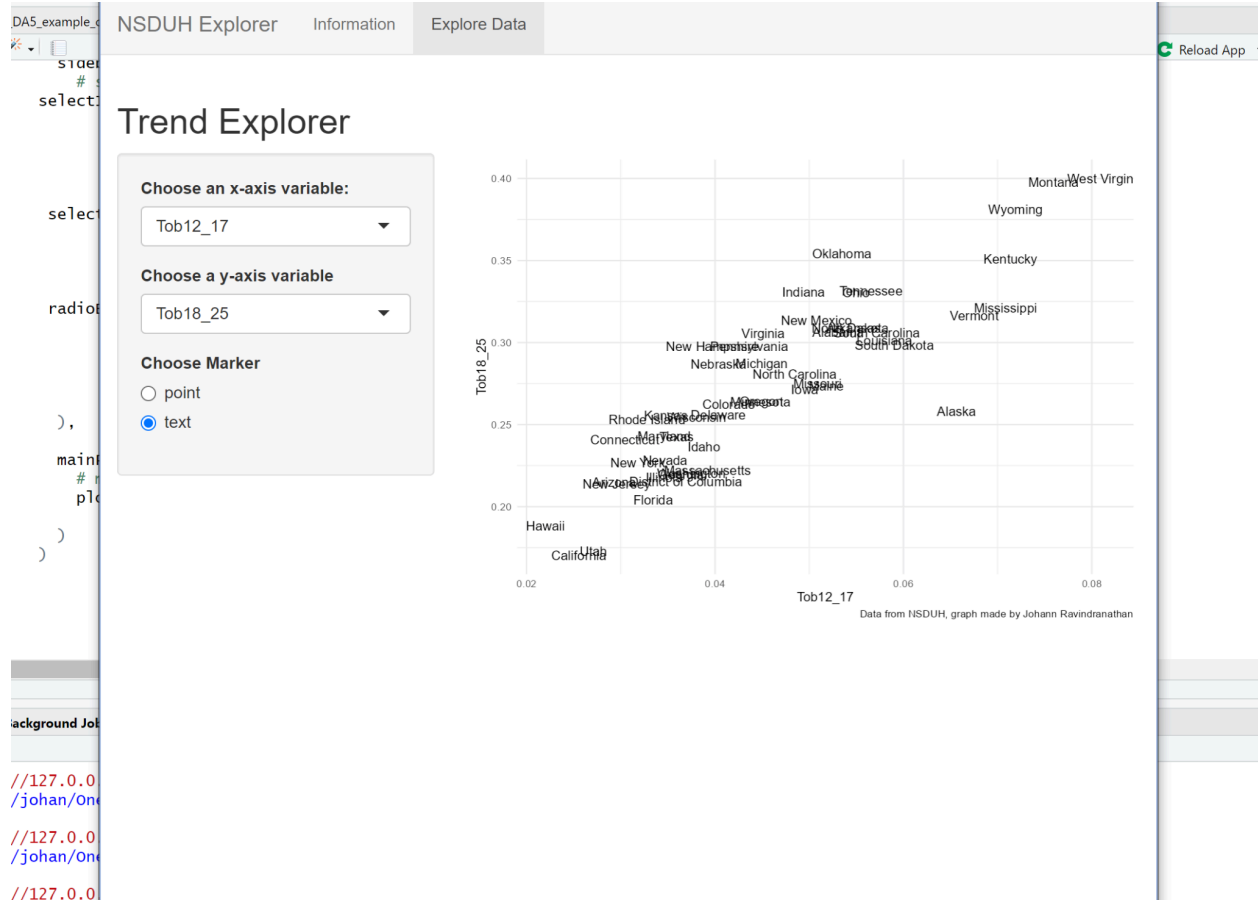

## Screenshot 3

Explore Data with Tob12\_17 and Tob18\_25, using point.

## Screenshot 4

Explore Data with Tob12\_17 and Tob18\_25, now using point.

That's all! Download as a PDF and upload on Canvas along with your .R files!
