

Assignment 2 was a group project, and I worked with Chandler Jensen.

In this project we were asked to take a walk through an area of Seattle, observe our surroundings, and create a field sketch. Then we ran a Web Crawler to collect data from Yelp.com about a subject we wanted to say more about from our area. This data would be turned into a Radial Dendrogram.

Chandler and I chose Ballard as our zone. We spent around an hour and a half walking in the area around the Nordic Heritage Museum, the Carl S. English Jr. Botanical Gardens, NW Market Street, and northwards to the Ballard Community Center. We made observations about the region, and separately created field sketches.

Based on our time in Ballard, we decided to create our visualization about Restaurants / Cafes and their serving times.

In this folder you will find:

- **Geog 450 Lab 2 Jotboard.pdf**
 - The Jotboard we created before heading to Ballard, where we planned logistics and some initial notes
- **Geog 450 Lab 2-1 Field Sketch.pdf**
 - My field sketch(es) and observations from our walk through Ballard
- **GEOG 450 - Lab 2 Yelp_API Crawler.ipynb**
 - The notebook with the instructions and our execution of the Web Crawler, which we used to create a dataset about restaurants in the Ballard area
- **BallardYelp - ballardCafe.csv**
 - The dataset we created
- **GEOG 450 - Lab 2 Report**
 - The report we put together to show our visualization and explain our thoughts on the process and outcome

- NOTE: Chandler created the Radial Dendrogram in Observable. If it isn't linked in one of these documents, I don't have that link available to me
- **Lab 2-3 Project Essay.docx**
 - The essay I submitted for this project
